Chain

Installation holes for axle (metal rod) 1.6 mm. Cut metal rod to the length of the corresponding screws

Air ducts and fuel tank cover

Adjust position of pipes to make them fit the bike.

Other detailed parts

Screws from the base kit for front and rear wheels as well as for steering column can be replaced with metal rods. Installation hole diam. 1.6 mm. Adjust the length according to the screws.

Chain tensioner nut has holes through which metal wire should pass to recreate a locking cotter. Chain tensioner installation hole 0.6 - 0.7mm. Use rear wheel axle cylinder (18) to install the rear wheel.

Use front, rear and swingarm nuts installation use reference photos attached to the base kit.

Foot pegs installation holes 0.8 mm.

Install rim counterweights on the rims. Smaller for front, bigger for rear wheel.

Swingarm chain guard should be added to the swingarm on chain side.
