GENERAL ASSEMBLY INSTRUCTIONS

CUTTING

Carefully remove all parts from the supports using sharp cutters, such as Tamiya 74123. Do not twist, bend, or break off the parts. Remove any remaining support material carefully and clean the attachment points before assembly.

FITTING

Before gluing, test-fit all parts to ensure proper alignment and fit. If necessary, carefully adjust the parts using fine files or sandpaper.

GLUING

Remove any resin dust or debris before gluing. Make sure all mating surfaces are clean and dry. Use CA glue (cyanoacrylate) to assemble the resin parts and to attach resin parts to components from the base kit. For parts where a clean, invisible-looking joint is more important than maximum strength, Micro Kristal Klear or a similar adhesive may be used.

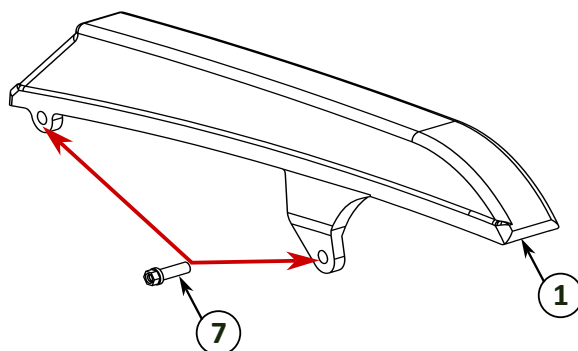

PAINTING

Use a suitable Mr. Surfacer or Tamiya primer before applying paint.

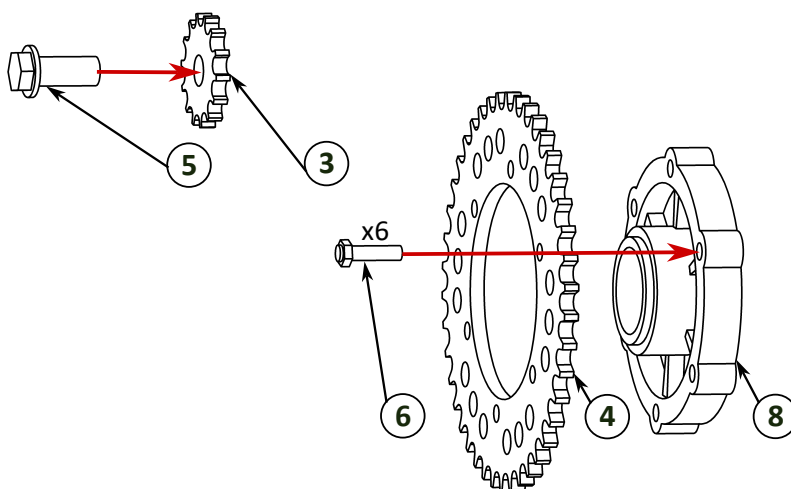

IMPORTANT

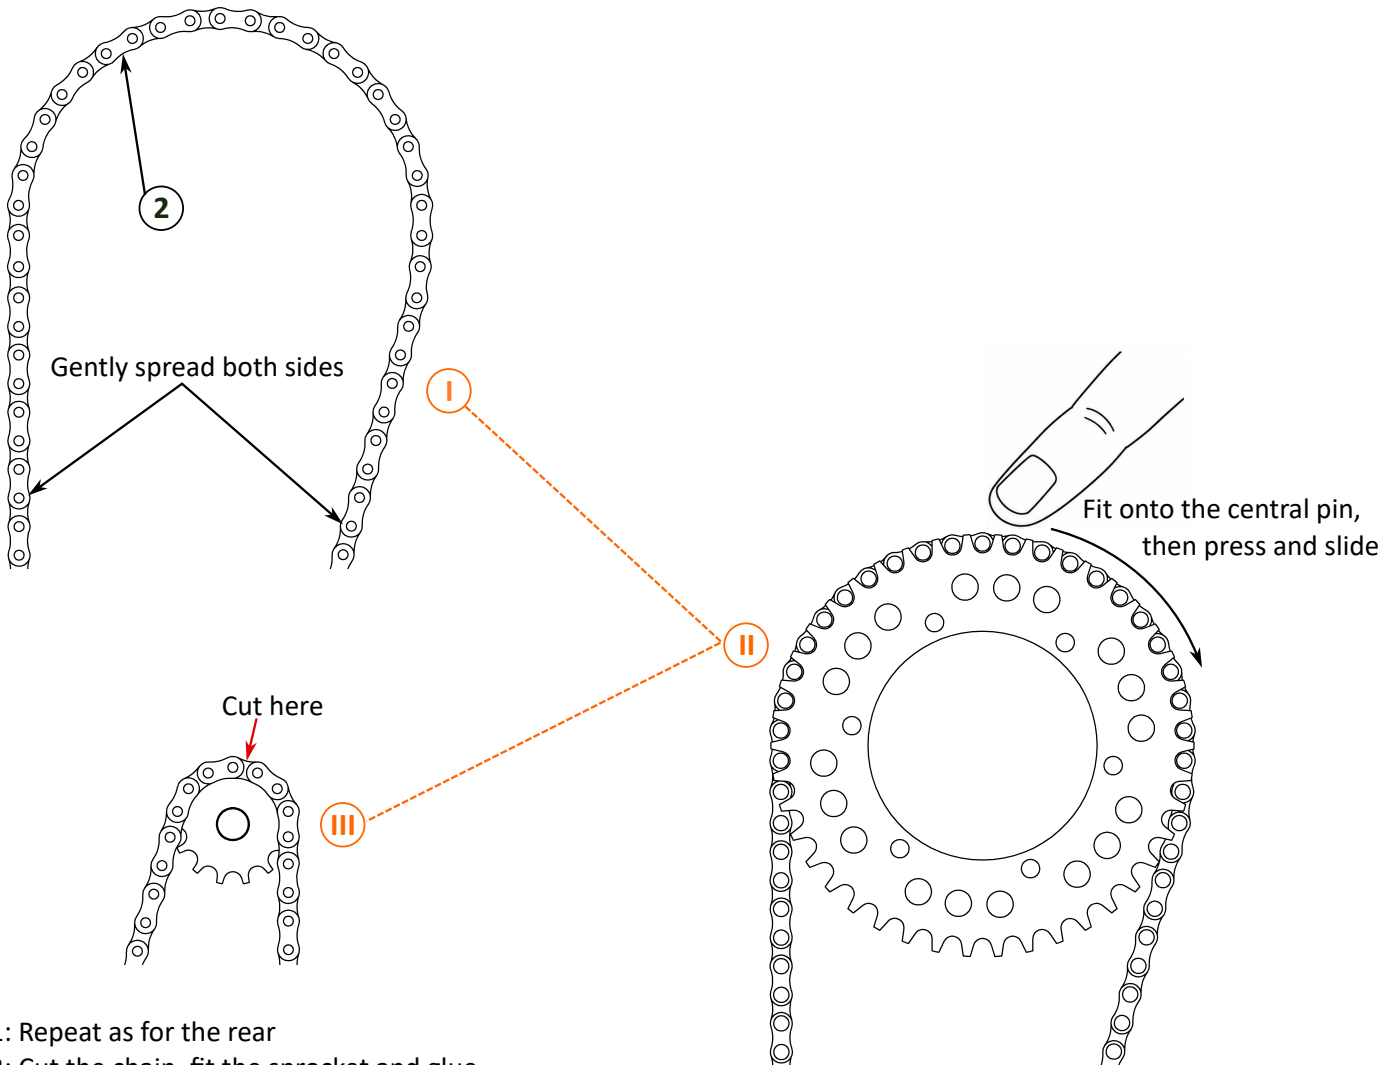

Resin parts are delicate and may be thinner or more fragile than the corresponding parts in the base kit. Handle them with care and do not use excessive force during assembly.

CHAIN GUARD

CHAIN AND SPROCKETS

Ver. 1: Repeat as for the rear

Ver. 2: Cut the chain, fit the sprocket and glue
